

Guidance on Acoustic Safety

Introduction

Article 3.1a of the R&TTE Directive concerns “the protection of the health and the safety of the user and any other person, including the objectives with respect to safety requirements contained in Directive 2006/95/EC, but with no voltage limit applying”. The objectives referenced include “that persons, domestic animals and property are adequately protected against non-electrical dangers caused by the electrical equipment which are revealed by experience”. Accordingly, it is clear that acoustic safety must be included in assessment of the essential requirements of R&TTE. Here “acoustic safety” is used in its broadest sense and is not restricted to any particular concept or definition of “acoustic shock”.

Acoustic safety requirements for personal music players incorporated in R&TTE equipment are covered by harmonised standards¹ standards:

EN 60950-1:2006/A12:2011 Information technology equipment - Safety - Part 1:
General requirements

EN 60065:2002/A12:2011 Audio, video and similar electronic apparatus - Safety
requirements

There are no standards harmonised for the purposes of the R&TTE Directive concerning other aspects of acoustic safety of R&TTE equipment. It is therefore not possible to acquire a presumption of compliance in accordance with Article 5.1 of the Directive in every case where an acoustic safety issue is identified. In the absence of a suitable harmonised standard, manufacturers therefore have the choice of adopting the compliance procedure of Directive 2006/95/EC, where appropriate (Article 10.2 of the R&TTE Directive), or seeking the opinion of a notified body (Article 10.5 of the R&TTE Directive).

This guidance is aimed at notified bodies that are requested to give an opinion on the acoustic safety of telephone handsets and headsets (wired, cordless or mobile) or other R&TTE using a handset or headset or with facility for the intentional connection of a handset or headset. It should be noted that the handset or headset use may be incidental to the R&TTE functions of the equipment concerned.

Guidance

Assessment should take into account the particular nature of the device and its intended use (Article 6.1 of R&TTE & Article 2.1 of LVD). This means that any instructions or guidance supplied with the equipment must be taken into account but does not imply that any particular information is mandatory.

The European guide, report and standards listed overleaf offer some possibilities for assessment in the above context. They are not mandatory but they should not be ignored. They may be applied in whole or in part or combined or substituted with other methods at the discretion of the notified body so as to reach an informed opinion on compliance with the essential requirements.

¹ Prepared under Standardisation Mandate M/452 of 28 September 2009 to CEN, CENELEC and ETSI in the field of Directives 1999/5/EC, 2006/95/EC and 2001/95/EC for Health and Safety aspects of personal music players and mobile phones with a music playing function.

The notified body should maintain records which show the rationale, based on the above considerations, used to arrive at a particular opinion.

The opinion itself should be documented in accordance with R&TTE CA TGN10 "Guidance on the Minimum Content of a Notified Body Opinion Document".
